Open to relocation - Netherlands (Eligible for Highly Skilled Migrant / EU Fast-Track Visa)

SUMMARY

Software Engineer with 5+ years of experience building scalable Java/Spring Boot backend systems and microservices. Proven ownership of production platforms handling 5M+ requests/day across cloud-native environments. Strong focus on distributed systems, security, and reliability, with hands-on experience integrating AI-driven automation into enterprise platforms.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Matillion

Dec 2025 - Present

Hyderabad, India

- Engineered 3 high-throughput microservices handling **5M+ daily requests (58 req/sec)** using Java, Spring Boot, and Kafka within Matillion's Data Productivity Cloud.
- Built a multi-tenant RBAC platform on Auth0, OAuth2, and SpiceDB for 6 tenants, reducing unauthorised access attempts by **60%**.
- Accelerated **cross-functional** frontend performance by engineering a modern micro-frontend interface using React, TypeScript, and RESTful **API integrations**.
- Developed** 10+ autonomous agent workflows on the Claude API and Model Context Protocol (MCP) to cut down **60%** of the workload of manual SSO setups and permission management.
- Achieved **95%** test coverage by delivering comprehensive unit, integration, and E2E test suites while resolving high-priority incidents on 24/7 on-call rotations and mentoring **2** junior engineers

Software Engineer, OpenText

Oct 2023 - Nov 2025

Hyderabad, India

- Modernised the core architecture of a legacy Java 11 EJB monolith to cloud-native **Spring Boot microservices** on Java using Spring Boot and Spring Security.
- Constructed fully **responsive, reusable UI component** libraries for a data-driven analytics dashboard using React and Hooks to enhance frontend user engagement and experience.
- Introduced a Claude API and n8n-based LLM workflows for automated document processing, which improved the business unit's efficiency by **35%**.
- Rebuilt the Kubernetes CI/CD pipeline around Docker and GitOps to shrink the release cycle from weeks to days, and deployment failures dropped by **40%**.
- Strengthened the system reliability of 2 product lines by serving as a formal **Security and Build Advocate** while mentoring **2** engineers on secure coding.

Associate Software Engineer, OpenText

May 2021 - Sep 2023

Hyderabad, India

- Maintained core modules across two enterprise applications, keeping existing customer workflows stable through several rounds of iterative modernisation.
- Tuned Hibernate ORM mapping and PostgreSQL queries, bringing p99 latency down from **21ms to 5ms**.
- Standardised** automated build efficiency by leading the migration from legacy Ant to Maven and embedding automated unit/integration test suites.

PROJECTS

ARGUS - AI Risk GUard Shield (HIPAA-Compliant Backend Redaction Platform)

- Built an AI-driven OCR application via OpenText Navigator to detect and redact PII/PHI, using a RBAC system that cut manual redaction effort by 80%.

KEY SKILLS

Languages: Java, React, TypeScript, JavaScript, SQL, Node.js

Backend: Spring Boot, Spring Security, JPA/Hibernate, REST APIs, gRPC, Microservices

Distributed Systems: Apache Kafka, Event-Driven Architecture, Redis, Rate Limiting, Load Balancing

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, ArgoCD, GitOps, Grafana, Prometheus

Databases: PostgreSQL, MSSQL, SpiceDB, DynamoDB

AI Engineering: Claude API, MCP, Spring AI, n8n, Agentic Workflows

EDUCATION

Bachelor of Technology in Computer Science

July 2017 - Jun 2021

SRM Institute of Science and Technology, Chennai

- Specialisation in Software Engineering
- Graduated with First Class Honours
- Anabin H+ Recognized University (Meets academic criteria for EU Fast-Track Permits)

Research Publication

Secure E-Voting System Using Blockchain Based on Solidity Technology

- Paper published in AIP Publishing

LANGUAGES

- English - Fluent / Professional
- Tamil - Native
- German - A2
