Professional Summary

Senior Backend Engineer with **5+ years** architecting distributed, high-throughput systems in Java and Spring Boot, scaling APIs to **5M+ requests/day**. Built a multi-tenant RBAC platform that cut unauthorised access by **83%**, and engineered agentic AI automation with the Claude API and MCP that eliminated **60%** of manual operations. Proven owner of production-critical backend systems, end-to-end system design, security architecture, and reliability at scale.

Experience

Matillion

Dec 2025 – Present

Senior Software Engineer

Hyderabad, India

- Architected and led development of 3 Java microservices powering Matillion's Data Productivity Cloud using Spring Boot, Kafka and Kubernetes, across **5M+ requests/day**.
- Engineered a custom RBAC authorization platform using Auth0 and OAuth2, supporting 6 tenants and cutting unauthorized access vectors by **83%**.
- Designed and built 10+ autonomous agent workflows using the **Claude API and MCP**, automating SSO and permissions management and eliminating **60%** of manual operations.
- Owned delivery of high-throughput REST APIs in Spring Boot and JPA, handling **58 requests/sec** with strict versioning and full observability.
- Delivered **95% test coverage** across unit, integration, and E2E suites while resolving critical production incidents on 24/7 on-call rotations.

OpenText Technologies

Oct 2023 – Nov 2025

Software Engineer

Hyderabad, India

- Migrated a monolithic Java 11 EJB application to **cloud-native Spring Boot microservices** on Java 21, re-architecting authentication with Spring Security and JWT.
- Designed and integrated enterprise LLM workflows using the Claude API and n8n for automated document processing, improving business unit efficiency by **35%**.
- Automated multi-region Kubernetes CI/CD pipelines using Docker and GitOps, cutting deployment failures by **40%** and shrinking release cycles from weeks to days.
- Served as the formal **Security & Build Advocate** across 2 product lines, driving secure code modernisation and build-process improvements.
- Mentored **3** engineers on distributed systems design and secure coding practices, raising team-wide code quality.

OpenText Technologies

May 2021 – Sep 2023

Associate Software Engineer

Hyderabad, India

- Maintained and enhanced core functional modules across two major legacy enterprise applications, ensuring uninterrupted stability for existing customer workflows through iterative platform modernization.
- Optimised **PostgreSQL** query performance through Hibernate ORM tuning, reducing p99 latency from **21ms to 5ms**.
- Led the migration from Ant to **Maven**, establishing a modern, testable build pipeline with integrated unit, integration, and E2E testing that remains in use across the team today.

Technical Skills

Backend: Java, Spring Boot, Spring Security, JPA/Hibernate, REST APIs, gRPC, Microservices, OAuth2, Auth0

Distributed Systems: Apache Kafka, Event-Driven Architecture, Redis, Rate Limiting, Load Balancing

AI & LLM Engineering: Claude API, MCP, Spring AI, n8n, Agentic Workflows

Cloud & Infrastructure: AWS, Docker, Kubernetes, Terraform, ArgoCD, PostgreSQL, SpiceDB, Grafana, Prometheus

Key Project

ARGUS — AI Risk Guard Shield

HIPAA-Compliant Backend Redaction Platform

- Built an AI-driven OCR pipeline via the Claude API to detect and redact PII/PHI, using a multi-layer RBAC system (SpiceDB) that cut manual redaction effort by **70%**.

Education

B.Tech in Computer Science

2017 – 2021

SRM Institute of Science and Technology

Chennai, India

First Class Honours
